

Odyssey and the Power of BPMN

Business Process Modeling and Notation (BPMN) is a way to visualize business processes that simplifies complexities and enables understanding at a glance. Odyssey leverages BPMN to bring unprecedented elegance for designing and monitoring robust automation workflows.

Odyssey's Graphical Workflow Editor makes it easier than ever to build workflows and achieve powerful results. With the click-and-drag of a mouse, you can rearrange blocks or tasks in complex workflows and projects. You will see the implications of your changes immediately. Need more details? Drill down on any element to learn more about the people, the processes, and the systems involved. The BPMN diagram can be exported at any time to your other tools.

On the operations side, Odyssey provides powerful real-time monitoring within an intuitive graphical display. See what the workflow has done, what it should do next, and any problems it encountered along the way. And just like the design view, you can drill down on any element to learn more about the people, the processes, and the systems involved.

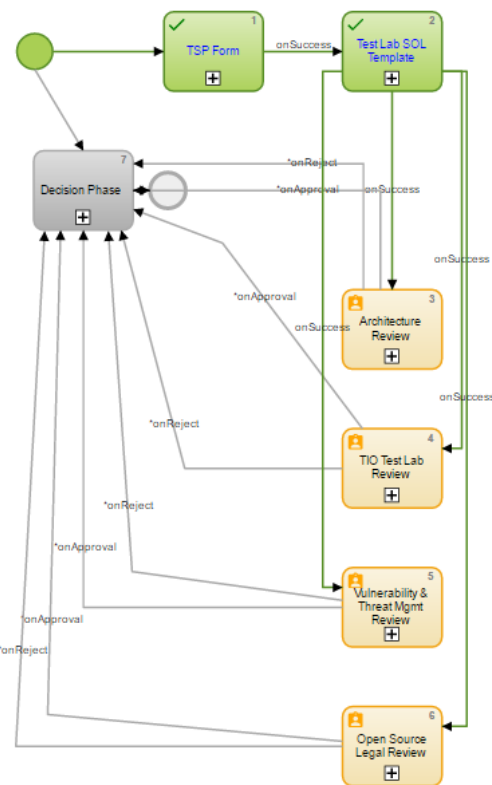

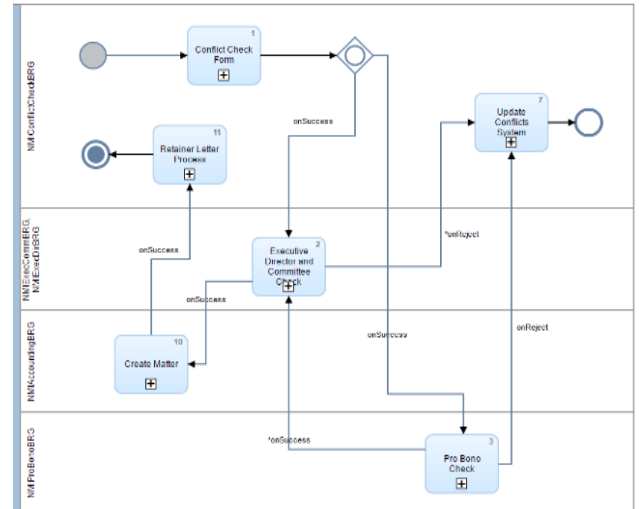

Modeling complexity has never been simpler.

Law Firm Client Vetting for Conflict-of-Interest

A law firm needs to better regulate its large client vetting and acceptance. The firm designs a workflow that starts with a form that gathers information to check for conflicts of interest. Once that is completed, the information is forwarded to the pro bono consul and a review committee. The pro bono consul examines the potential conflicts against the current pro bono caseload, and if the consul finds any issues, the consul notifies the review committee. The Executive Director and review committee, meanwhile, examines the potential conflicts against existing client and caseload, and the recommendations of the pro bono consul.

At each stage, the workflow in Odyssey makes sure the appropriate information is solicited, so that every decision is as best-informed as it can be. When the review committee makes its final decision, any conflicts are recorded, or the matter's record is started in the system and the retainer letter is drafted. At a glance, the right people in the law firm can determine where the matter stands.

What was the time to implement all of this? Just one week.

When a large organization picks the wrong software, it quickly gets expensive for the organization and frustrating for the users. That is why large organizations are so careful about the process, and why the rigor of a workflow brings quality.

After someone requests the software for the organization, the testing lab acquires a trial license and begins the test process. The lab feeds appropriate information to the architecture review and the vulnerability and threat management review, while simultaneously conducting its own review for functionality and general usability. If there are Open Source considerations to the software, a legal review is launched. Each of the groups conducts its review, and the Odyssey forms make sure each group finishes their portion and provides several pages worth of mandatory information. The decision process is gated by completion of all of the coordinated reviews; the decision makers can oversee where progress is being made, or where it is stalled, at any moment.

What is the end result of this improved process? Software evaluation is performed correctly more often, and the organization avoids costly, time-wasting choices. It only took two weeks and one engineer to implement the entire process, perfectly tailored to the needs of the organization, in Odyssey.

Odyssey

Pantheon's flagship product, Odyssey, is a **Workflow Automation Platform with over 300 out-of-the-box integration plug-ins**. It is a no code solution that allows customers to significantly reduce time-to-deployment for new services, applications and infrastructure. It is vendor agnostic and allows easy integration of both best-of-breed solutions and new custom solutions as they develop.

- ✓ **Powerful Integration**
- ✓ **No Code Process Solutions**
- ✓ **Powerful Workflow Editors**
- ✓ **Intuitive Form Design**
- ✓ **Robust Security**
- ✓ **Easy Dashboard Interface**
- ✓ **Mobile-Ready**
- ✓ **Cloud-Ready**
- ✓ **Cross-system Scheduling**
