

Technical Benefits of Workflow Automation

If you have a complex web of systems and people working to accomplish your goals, but sometimes it just does not come together, **workflow automation may be the solution to your problems.**

Speed

Workflow automation speeds processes for both computers and humans. For human-to-computer interactions, workflow automation reduces multiple steps that would traditionally take humans minutes at the keyboard down to seconds, all guided by simple forms. Building intelligent, situationally-aware workflows reduces processes that took human interaction stretched over hours across multiple systems to a human filling one online form and clicking one button. Workflow automation also speeds computer-to-computer interactions by reducing – or eliminating – the need of humans to bridge the gap between two systems that are not natively compatible. Workflow automation even speeds traditionally human-to-human interactions, by routing forms, issuing reports, conveying requests, and enforcing approval chains with ease.

Consistency

Humans make mistakes. The more complex a process, and the more people involved in it, the more likely a mistake will happen – unless the humans have some help. Workflow automation not only makes it possible to perform series of complex tasks with consistency because a computer is issuing the instructions to other computers, it even helps the humans perform at their best by guiding people through complex processes so the human can do the right things, in the right order, at the right times.

Security

Any time a human has direct, unfettered access to a system, there is a security risk. Reduce the number of user accounts that have direct access to a system by making the workflow the gatekeeper. Security on the workflow allows only the right people to launch that process, and security on the system is tightened to only allow the workflow to perform its permitted tasks.

Odyssey

Pantheon's Odyssey is a comprehensive Workflow Automation Platform that ties together your organization's existing IT infrastructure to achieve savings in time and resources.

Odyssey has automated such diverse activities as: change management, knowledge management; automated disaster recovery; security, control and auditing; compliance, governance and reporting; build and deployment management. Whether deploying configuration changes to a thousand servers or simplifying the paperwork, Odyssey will help you get to your solution more quickly and economically than custom application development.

Customers in such diverse areas as finance and banking, energy and utilities, pharmaceutical and healthcare, manufacturing, telecommunications, both in the private and public sectors have benefited from Odyssey's power.

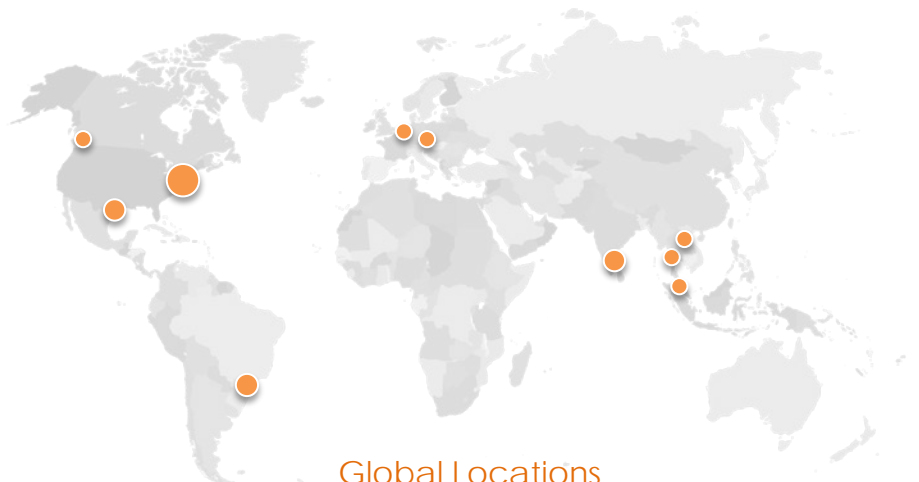

- Powerful Integration
- No Code Process Solutions
- Powerful Workflow Editors
- Intuitive Form Design
- Robust Security
- Easy Dashboard Interface
- Mobile-Ready
- Cloud-Ready

Washington, DC
