

# Pantheon DevOps Services

Pantheon's DevOps Services leverage key practices and techniques, along with our Odyssey automation solution, to **streamline software development and operations processes and help organizations along their DevOps journey**. With our strong experience working with traditional and DevOps-enabled organizations, we understand both cultures and what it takes to transition from one to the other over time.

Our expertise will help you understand what DevOps could mean for your company, where you stand today, where you're headed and, most importantly, develop a plan to get there. Pantheon's DevOps experts use the Odyssey automation platform to increase collaboration across development and operations, enabling faster, more predictable, and more frequent deployments to market.

## Pantheon DevOps Assessment & Evaluation Services

Pantheon's DevOps Assessment and Evaluation Services help your organization understand the status quo of both your organization and the state-of-the-art, and to begin your DevOps journey with an implementation roadmap that suits your specific needs. Using either an abbreviated or an extended workshop format, your custom assessment may cover a plurality of applications and pipelines. Our services would also include non-standard deliverables such as special analysis, benchmarks, and reports.

Assessments are typically conducted with a cross-section of leaders and key staff representing Dev, QA, Operations, Infrastructure and InfoSec. Pantheon uses proprietary assessment tools to navigate and document the assessment process in real time during the interactive sessions. Our deliverables typically include fully documented and peer-reviewed implementation recommendations, a roadmap, key performance metrics, and a guide and resources package that will guide your DevOps transformation to meet your DevOps strategic goals most effectively.

Pantheon's DevOps Assessment service covers end-to-end analysis of critical success factors for an application value chain. The assessment includes DevOps disciplines such as: DevOps Leadership, Collaborative Culture, Design for DevOps, Continuous Integration, Continuous Testing, Continuous Monitoring, Continuous Security, Elastic Infrastructure and Delivery/Deployment. Additionally, the assessment focuses on three dimensions that make or break any DevOps effort: People, Process, and Technology.

The assessment process includes preparation surveys, interactive workshops, and interviews conducted on client's premises. The assessment is conducted with a cross-section of key leaders and staff representing the development, QA, Ops, Infra and InfoSec teams of an organization.

# DevOps Roadmap and Strategy

Pantheon's DevOps expertise has helped organizations lay a strong foundation by designing their digital strategies, laying out the road map for the future, and helping organizations by working toward their digital transformation in line with industry standards. As an essential component of the plan, we help our customers with a DevOps implementation with a complete automation of their processes, and a rigorous Continuous Integration and Continuous Delivery (CI/CD) system.

Our DevOps implementation services offer consultation, design, implementation and support of a solid DevOps framework for their business without compromising the reliability and effectiveness of their existing applications. Our roadmap and implementation services will help your company develop a software development methodology standard that helps in automating and standardizing of your infrastructure deployment process with the integration of development & operations functions in the same cycle. Our DevOps practice will help you align your development and operations to enhance operational efficiency, time to market, easy identification of emerging issues, and the delivery of applications, products and services at a much faster velocity than traditional methods.

Contact **Pantheon Inc** today to learn how Pantheon's DevOps Services can accelerate your entire development-to-product/service cycle.
